

INGENIERÍA DE IA / AI ENGINEERING

# AI projects that bloom.

An external AI engineering team for software companies.

# AI integrated into your product.

For SaaS teams and software consultancies.

## Context

An existing product, a technical team and an opportunity that needs a clear scope.

## Contribution

Design, development and integration with reliability, performance and cost criteria.

# Three ways to work together.

## 01

---

### Define

Diagnosis, data, architecture and evaluation criteria.

## 02

---

### Build

An evaluable first version and its production integration.

## 03

---

### Train

Applied AI tailored to the team's context and responsibilities.

# Define a technical foundation.

## AI Gap Analysis

Identify AI opportunities, constraints and priorities for your product.

## AI Project Foundations

Define architecture, data, scope and evaluation before building.

Simplified flow / conceptual architecture

# Build and deliver to production.

## 01 Agent MVP

Build a first version to evaluate the system's behaviour.

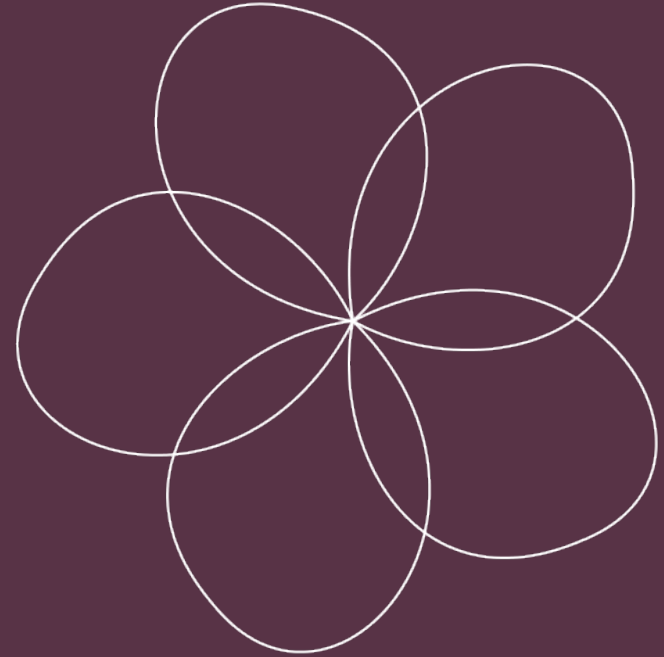

## 02 Production Delivery

Integrate, prepare operations and agree on delivery criteria.

# Applied AI training.

Work with your team's context, tools and technical decisions.

---

Learn / Test / Apply

# A method with deliverables.

**01****Context**

Problem, users and constraints.

**02****Definition**

Scope and acceptance criteria.

**03****Build**

Implementation and evaluation.

**04****Delivery**

Integration and documentation.

# Agree on how to evaluate.

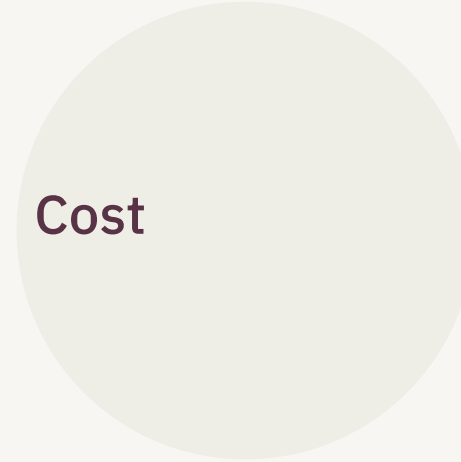

## Quality

Samples and criteria that represent actual use.

## Performance

Latency and behaviour under agreed load.

## Cost

Cost per use and explicit operational limits.

# Clear technical responsibility.

## Direction

Aritz leads initial meetings,  
consulting and technical definition.

## Team

Development and integration are  
delegated to the team under his  
technical direction.

One technical direction / one implementation team

# Evidence with context.

## 01 Context

---

### Projects

Distinguish client work, collaborations and co-founded products.

## 02 Contribution

---

### Results

Explain the sample, method and scope of each evaluation. Use authorised screenshots and references.

## 03 Evidence

---

# A useful first conversation.

## Product

What you are building and for whom.

---

## Opportunity

What behaviour you expect from the AI system.

---

## Constraints

Data, integration, timing and quality criteria.

---

# Talk about your project.

---
